working together

Since 1989, Flexicare has been committed to providing quality, service, and value. You can feel confident that we are working together towards a better environment for our clinicians, patients, and points of care.

With over 40 years of experience in the design, development and manufacture of medical devices, Flexicare has developed a world class reputation.

Flexicare is a privately owned, leading manufacturer and supplier of medical devices with over 40 years of experience in the healthcare sector.

Headquartered in the UK, Flexicare is a major supplier to the NHS and private institutions in the UK, as well as having an international presence in over 105 countries through its appointed distributors and supported by its own subsidiaries with offices in the USA, Australia, China, Europe, India, Korea, Middle East, Malaysia, Mexico, Egypt, Switzerland and Indonesia.

your partner
in quality healthcare

CLINICAL

Our products are designed with clinicians worldwide to support positive patient outcomes. From single-use consumables to new technologies, our products consider the hospital environment while ensuring we provide quality devices for clinicians.

SUSTAINABLE

We recognise that how we manage our buildings, manufacturing, people, and supply chains has an impact. We are integrating our sustainability strategy into all our business and operational plans and are dedicated to contributing to the UN Sustainable Development Goals for 2025.

INNOVATION

We are strongly committed to advanced design, product development and new manufacturing techniques. This supports continuous product innovation and provides a fast response to current and future market needs.

ProVu™ Video Laryngoscope

Created with intuitive technology for plug-and-play use. Ready to use in seconds. The wipeable display with sterile, single-use handle and low-profile metal blade are designed for ease of use, reduced risk of cross-contamination, and patient safety.

Ideal for elective and unanticipated difficult airways

Difficult airways remain a challenge and unsuccessful management of the difficult airway is a main cause of complications in anesthesia. When intubating, either electively or facing an unanticipated difficult airway, it is recommended the products used are reliable and familiar.¹

ProVu Video Laryngoscope Macintosh blade is the same shape and profile of our popular BritePro Solo, providing reliability with the added advantage of video technology.

Apply familiar airway management techniques with confidence while sharing a better view with your team.

70° Screen Tilt

When space is restricted, the ProVu Display can be tilted, optimising your visual placement of the laryngoscope blade without changing your technique.

Plug and Go

ProVu Video Laryngoscope has an intuitive “plug and go” interface. Wake the display with one touch of a button. The responsive, text-free display is ready to go.

Single Use Safety

ProVu Video Laryngoscope blade and handle are single-use, which limits the handling of a contaminated device and reducing the risk of cross-infection.

The ProVu Display can be easily decontaminated using standard disinfectants, so the product is free from contamination and ready to use for the next patient.

Video technology has made intubation easier, but has it made it safer?

Laryngoscope handles are considered high risk as they are often contaminated with blood, indicating penetration of mucous membranes and are a potential source of cross contamination and Hospital Acquired Infections, placing both patients and staff at risk.^{2,3}

Current practices for decontamination and disinfection between patients can be ineffective, potentially leaving residual contamination that could be a source of cross-infection.²

ProVu Video Laryngoscope handles and blades are single-use, removing the need for decontamination.

More Available Space

At 12mm thickness, the ProVu Video Laryngoscope blade improves visualisation of the airway, and increases manoeuvrability and working space, reducing the risk of dental trauma.

Single-Use Safety

The ProVu video laryngoscope handle and blade is a single-use device, reducing the risk of cross-infection, reprocessing costs, time and storage.

Ultimate Confidence & Control

The ProVu single-use handle provides significant grip and comfort, with reduced height to facilitate difficult intubation particularly for situations with limited neck movement and obesity.

100% All Metal Blade

Specially engineered metal blade provides the confidence needed for direct and video laryngoscopy.

Screen Tilt

Achieve the optimal screen viewing angle for you and the team, improving efficiency and decision making.

Anti-Fog Design

The internally mounted Anti-Fog design reduces the need for warm up time and allows users to intubate quickly with a clear view.

² Lowman W. Bacterial contamination of re-usable laryngoscope blades during the course of daily anaesthetic practice. SAMJ. June 2013.

³ Machan.M. Infection Control Practices of Laryngoscope Blades: A Review of the Literature AANA 2012.

PROVU VIDEO LARYNGOSCOPE

The future is in your hands

The ProVu Laryngoscope imaging system has a focal length, field of view and illumination field optimised for an improved view of the glottic anatomy. Combined with excellent colour rendition, blackout and blind-spot reduction technology, ProVu Video Laryngoscopes reduce the shadowing effect of an ET Tube when inserted into the upper airway.

Macintosh Blades

The Macintosh blade is the same shape and profile of the successful and reliable BriteBlade Pro, ideal for routine intubation, but with the advantages of video technology to aid intubation.

Hyperangulated Blades

The shape, profile and angulation of the Hyper Blades provide a superior view of the glottic opening without having to align the oral, pharyngeal and laryngeal axis reducing the need for lifting pressure and potential for trauma to the patient. Ideal for difficult, anterior airways and patients with restricted neck movement.

ProVu™ Video Stylet

ProVu Video Stylet is a new generation intubation device, combining modern visualisation technology with a unique ETT guidance system, ideal for every type of intubation.

Get to where you need to go

ProVu VS overcomes the limitations of existing video intubation devices,
making navigating difficult airways effortless.

PROVU VIDEO STYLET

95° Range of Movement

Use the patented bi-directional control to flex or extend the manoeuvrable tip. The soft ET tube tip reduces possible trauma.

Direct Visualisation

No need for an X-Ray. Innovative visualisation of ProVu VS, shows ET tube passage all the way down to the carina.

Complete Visualisation

High-resolution camera technology with anti-fog coating, paired with a range of display sizes to suit your space.

Removable Malleable Rod

Remove malleable rod, for extra flexibility during nasotracheal intubation or intubating through a laryngeal mask

ProVu™ Video Displays

ProVu displays give a crystal clear, ultra high quality image. 8" or 3.5" display options provide flexibility to the clinical situation and setting.

Make your first attempt your only attempt

Repeated attempts at intubation are known to be associated with patient morbidity¹ so it is important to get it right first time. ProVu Displays have been designed with leading anaesthetists to help achieve first time intubation success in both routine and difficult airway situations.

Battery Indicator

On screen battery indicator clearly displays amount of power left. Affording you safety in mind that you have enough power to complete your procedure.

Landscape Orientation

The landscape orientation of the display provides a wider view of the airway, allowing early visualisation of the ET Tube aiding accurate placement.

Reduce Contamination

ProVu Displays are wipeable so can be easily disinfected with standard and high level disinfectants. Reducing risk of cross- contamination and making it ready to use for the next patient.

¹ Consensus guidelines for managing the airway in patients with COVID-19 T. M. Cook, 1 K. El-Boghdady, 2 B. McGuire, 3 A. F. McNarry, 4 A. Patel 5 and A. Higgs 6.

ProVu 3.5" Display

Our 3.5" display allows for a minimum of 60 minutes of continuous use from a full charge.

ProVu 8" Display

Our 8" display allows up to 90 minutes of use via battery from a full charge, or can be plugged in for continuous use.

ProVu Pole Stand with Articulating Arm

The all in one intubation workstation. Achieve the optimal screen viewing angle for you and the team, improving efficiency and decision making. Storage for ProVu devices in the basket and charging capabilities on the pole.

ProVu Table Stand

An elegant and sleek design, with anti-slip base plate enables you to place the 8" display at the required height and angle.

LarySeal™ Pro

For rapid and secure airway management, improved patient safety with gastric access to reduce risk of pulmonary aspiration, and fast and accurate ET tube placement with a unique guide system.

- + 2nd Gen design
- + Single use
- + DEHP free
- + Latex free

LARYSEAL PRO

Maintaining oxygen SAD insertion¹

When the plan is to intubate the patient, but you encounter an unexpected difficult airway or a "Cannot Ventilate - Cannot Oxygenate" situation, then LarySeal Pro can be used as a conduit for endotracheal intubation directly using ProVu VS or a flexible scope, while maintaining oxygenation.

¹ DAS guidelines for unanticipated difficult intubation in adults 2015

the new generation mask for safe and effective airway management

Epiglottic flap

Integral fenestrated flap protects from blockage with minimal increase in flow resistance, and elevates the epiglottis for easy, trauma-free ET tube or bronchoscope insertion.

Reduced risk of aspiration

Integrated suction catheter port for efficient removal of fluids and gastric contents.

A guide for blind intubation

Guidance system directs the ET tube both centrally and anteriorly towards the vocal cords.

Integral bite block

Resistance to collapse matches that of an oropharyngeal airway², keeping airway patent.

Anatomically shaped

Shaped to match patient anatomy and bucal tube is wide enough to keep its shape upon insertion for easier first time insertion.

No special tubes

Can be used with either oral/nasal or reinforced ET tubes for intubation. See table for max ET tube sizes relative to mask size.

3D VIEW

A comprehensive range of Laryngeal Mask Airways that adapt to the contour of the oropharyngeal airway for easy first time insertion success. Each LarySeal model shares common features and are designed to give you clinical confidence.

LarySeal Blue

The world's first 100% Single Use Silicone mask. The soft silicone material easily moulds to the oropharynx, providing easy insertion, and reliable seals around the glottic opening.

LarySeal Multiple

Reusable silicone laryngeal mask airway, can be sterilised up to 40 times. The LarySeal Multiple cuff adapts to the contour of the oropharyngeal area to provide a secure seal.

LarySeal Clear

Single use PVC laryngeal mask airway, with an extra soft satin texture to the cuff, to replicate a silicone mask providing a reliable seal around the glottic opening.

LarySeal MRI

Provides the same benefits of LarySeal Clear with the added benefit of a metal-free inflation valve, so can be used safely within an MRI suite.

LarySeal Flexi

For use in ENT ophthalmic, dental and head/neck surgeries. Reinforced main tube allows for positioning away from the surgical field, improving access without compromising the seal.

LarySeal Cuff Inflator

Colour Coded to match LarySeal Pilot Balloons, for quick identification of fill volume.

Reduced Profile Blades

Reduction in the shoulder and block height lowers the risk of dental trauma and provides additional space to manoeuvre the blade to obtain the best view. Typical overall height reduction of 71% in curved blades and up to 25% in straight blades.

Macintosh Blades

Ultra-low profile blade reduces risk of dental trauma and provides additional space to manoeuvre the blade for the best view possible.

Miller Blades

Rounded, straight tip and edges for a direct lift of the epiglottis.

Ultra Miller Blades

Dropped tip for increased elevation of the epiglottis without losing view or illumination of the vocal cords.

3 Handle Options

Standard handle delivers excellent control and feel. Lightweight, slimline Mini handle gives outstanding tactile feedback. Stubby handle is 40% shorter, for use when space is limited or reduced neck flexion.

Pre- assembled blade with a range of handles
to suit all user and patient needs.

Quick and Safe Battery Removal

Quick release mechanism in the reinforced block housing for easy battery removal, minimising both pre and post-use handling, reducing cross-contamination risk.

Advanced LED Light

With a minimum typical output of 2,500 lux, the fully encased, bright, LED light source directly focuses on the glottic area, delivering excellent visualisation at all times.

Colour Coded Blades

Blades are colour coded for size verification to easily identify the correct size for the patient. Sizing is also stated on the handle base.

BritePro™ Max

Bright, white LED light delivers a true visualisation of larynx and tissue structures.

Energy Efficient

LED bulb uses less power from the batteries than conventional halogen or krypton bulbs, reducing frequent battery replacement and heat at the the proximal end.

Green System Identification

The green band signifies that BritePro Max conforms to EN ISO 7376:2020 and is compatible with all fibre optic blade systems.

Integrablade

Wide profile fibre optic bundle provides maximum light transfer.

Rounded Tip

Blade features an atraumatic curved tip which reduces risk of tissue damage.

Fully Autoclavable

100% stainless steel construction of the blade provides long life, ensuring long term usage even after repeated autoclaving.

Reusable Blades

Made from high quality stainless steel, our blades give clinicians a complete choice for all patient intubation requirements.

Macintosh

Curved design allows the tip to be guided to the epiglottic vallecula for direct visualisation.

Miller

Shallow curved tip provides greater control in patients with a larger epiglottis.

Flexible McCoy Type

Hinged tip operated by a lever mechanism to elevate the epiglottis while reducing force.

Robertshaw

A gentle shallow blade curvature to lift the epiglottis indirectly in a similar way to Macintosh Blades.

Seward

Originally an infant blade for asphyxia neonatorum, also used for paediatric patients.

Wisconsin

For an improved view and greater control of the epiglottis with a subtly wider distal end.

Reusable Fibre Optic Blades

High grade of fibre-optics provides optimal light transfer without heat, reducing risk of thermal damage and maximising view of the larynx. Made from high quality stainless steel.

Reusable Conventional Blades

Blades are high quality stainless steel. The light source provides a high level of illumination and can be easily removed. While the distance from bulb to tip protects from accidental burns.

Bougie

Firm for easy insertion, yet flexible enough for easy removal once the endotracheal tube is in situ.

Coudé Tip

Facilitates correct placement by providing accurate feel of the tracheal wall C-Rings. The flexibility also makes for easy removal once the Endotracheal Tube is in situ.

Patient Safety

The smooth surface and rounded tip reduces risk of potential damage to soft tissue.

Clearly Graduated Marking

Indicates depth to guide correct placement.

Reduce Risk of Cross Contamination

Provided sterile, the single-use Bougie reduces risk of cross-infection.

PART	DESCRIPTION	QTY
038-968-033	Bougie / Introducer OD 3.3mm (10Ch) 700mm	10
038-968-050	Bougie / Introducer OD 5.0mm (15Ch) 700mm	10

Stylet

Contains an aluminium core and soft touch outer casing.

Flexible

Can be shaped into the required curvature to suit the intubation need.

Smooth Tip

Reduces risk of damaging soft tissue.

Wide Range of Sizes

Paediatric & adult sizes available, with different lengths and outer diameters suitable for all patient needs.

Single-use

Supplied sterile, reducing risk of cross-contamination.

PART	DESCRIPTION	QTY

VentiSeal™

A thin ultra smooth High Volume Low Pressure Cuff, that effectively conforms to the tracheal wall.

- + Sterile
- + Single use
- + Latex free
- + DEHP free

Soft Rounded Distal Tip

Gentle, bevelled tip reduces potential for soft tissue trauma during insertion, with minimal increase in flow resistance.

Large Murphy's Eye

Allows larger flow of gas, to occur, should the tip become occluded.

Circumferential Vocal Cord Markers

Double guide lines are clearly seen from all angles, facilitating safe and accurate cuff placement below the vocal cords.

Efficient, low pressure seal, available in a wide range of shapes and sizes for all airway needs.

Distance Markings

Clear and bold print give earlier indication of depth and is a simple, safe and reliable method for correct tracheal tube placement.

Kink Resistant

Retains tube patency for patient safety, whilst softening at body temperature to conform to patient's respiratory tract.

Coloured Inflation Line

For quick identification to differentiate from other tubing.

Simple Verification

Small rounded shape of the balloon gives a more responsive and tactile feel to the user for inflation check.

Reinforced Central Rib

Internal line running through the centre of the pilot balloon prevents complete collapse during rapid deflation. Line to cuff is always open.

Uncuffed ET Tubes

Uncuffed endotracheal tubes that provide safety and comfort for patients, enabling intubation with total confidence.

Clear Positioning Guides

2.0mm to 5.0mm ID tubes feature a single Depth Guide to identify correct placement. The orientation guide indicates position of the Murphy's Eye and tube tip.

Vocal Cord Placement Markers

Sizes 5.5mm and above feature the same double line as the VentiSeal tubes, making them clearly visible from all angles, facilitating safe and accurate tube placement.

Smooth Bevelled Tip

Rounded bevelled tip reduces risk of damage to vocal cords during intubation.

Distance Markings

Clear and bold print give earlier indication of depth and is a simple, safe and reliable method for correct tracheal tube placement.

High Resolution Radiopaque Line

For easy and accurate identification of tube position during x-ray.

Kink Resistant

Maintains tube patency whilst softening at body temperature to conform to the patient's respiratory tract.

ET Tube Holder

Securely retains the position of all sizes of ET Tube.

Jaw Opener

To be used with an ET Tube when the patient has 'Teeth Clench'.

PART	DESCRIPTION	QTY
038-96-001	ET Tube Holder	10
038-96-006	Jaw Opener	10

A blue, curved nasopharyngeal airway with a red swivel safety grip at the proximal end. The text "NasoSafe" and "ID 8mm 34fr" are printed on the tube.

NasoSafe[®]

Patented swivel safety grip reduces risk of the airway being drawn down the nasal passage whilst providing maximum comfort for the patient.

- + Swivel safety grip prevents tube from travelling down the nasal passage.
- + Colour coded sizes matching correct suction catheter size.
- + A soft rounded edge and angled cut help reduce risk of injury to patient

A clear, curved nasopharyngeal airway with a flared nasal opening at the proximal end. The text "NasoClear" and "ID 8mm 34fr" are printed on the tube.

NasoClear[™]

A simple and effective airway adjunct designed for easy insertion and maximum patient compliance.

- + Clear construcion
- + Flared nasal opening

Guedel Airways

An airway adjunct that prevents the tongue from obstructing the airway, whilst an integrated bite block protects from occlusion.

Smooth Bevelled Tip

For easy insertion, minimising the risk of patient trauma.

Embossed Size

Size is clearly visible on airway aiding quick and easy verification.

Sterile Single use

Individually sterile packaged and single use to reduce risk of cross-infection.

All Flexicare Guedel Airways have integrated colour-coded bite blocks matching the requirements of ISO 5634:2016

Berman Airways

Side channels enable use of suction catheters without obstructing the airway and for additional air flow.

Williams Airways

Opening on the distal half of the lingual surface, provides a conduit for fibre-optic guided intubation.

Inteliflo®

Inteliflo® is a single-limb anaesthesia circuit with a double lumen tube divided by a central longitudinal septum. The septal wall running along the tube length reduces compliance, delivering accurate gas volumes.

Less Drag

Absence of a Y-Piece lessens dead space, and when coupled with the lighter circuit weight, torsional forces transmitted to the patient airway device are reduced.

Gas Sampling Options

An integral monitoring line with machine end gas sampling port, or patient end gas sampling at the elbow meets set-up preferences.

Ease of Use

Easy handling of the single tube; clutter is minimised from the anaesthesia area and ICU bed. Design allows a wide range of patients to be ventilated.

Crush Resistant

Flexible, kink-resistant tubing maintains flow even if twisted through 180°.

Adaptability

Versatile system is suitable for use in Operating Rooms, Transport Ventilation, MRI Suites, or for patients requiring short term mechanical ventilation in an ICU.

Adult and Paediatric circuits in a wide range of lengths with additional component options to suit all clinical needs, makes Inteliflo® the intelligent choice for anaesthesia.

Parallel Circuits

Flexicare provides a comprehensive range of parallel anaesthesia circuits, also known as closed anaesthesia circuits, suited for low flow anaesthesia applications. All parallel circuits are equipped with sturdy Y-pieces suited to make connections with catheter mounts, filters and patient interfaces. The machine-end connectors provide an easy and secure fit to the anaesthesia machine, while still allowing ease of disconnection.

Corrugated Systems

Corrugated tubing ensures light weight, an advantage against drag and pressure on the patient. The shallow corrugations minimise flow resistance and turbulence, ensuring accurate flow rates.

Argentic Systems

Argentic circuits are anti-microbial breathing systems that combat microbial contamination within the clinical setting and reduce the risk of hospital acquired infections. Argentic breathing circuits are impregnated with a silver ion additive. When oxygen in the ambient air comes into contact with silver particles, it creates a catalytic reaction which helps deactivate microbes.

Smoothbore Systems

The smooth inner side of the tubing reduces turbulence, flow resistance and work of breathing in comparison with some corrugated tube circuits. The kink resistant spiral outer ribs support tube patency ensuring exact delivery of breathing gases.

Flexi-Lock Systems

Expandable circuit for greater flexibility within the operating room or for patient transport. The circuit can be expanded to the desired length and curved into specific positions without the need for tying down.

Corrugated Systems

Ventiflow Circuits

Ventiflow is Flexicare's coaxial circuit, ideal for anaesthesia and other forms of ventilation. The tube-within-a-tube design creates a very user-friendly breathing circuit, with less dead space than a conventional circuit. With a single limb circuit, clutter is minimised from the anaesthesia field and ICU bed. The possibility to have an integrated gas sampling line further reduces amount of untidy tubing.

Save Space

Tube-within-a-tube concept helps with circuit handling and reducing clutter.

Red Cap and Circuit Tester

All Ventiflows are packed with a 22F red cap and an inner-lumen tester, allowing proper leak testing.

Special configurations

More configurations available upon request. Please contact your local representative.

Mapleson Circuits

A comprehensive range of semi-open anaesthesia circuits are available, to suit your clinical needs.

Mapleson A

Mapleson A has a reservoir bag close to the fresh gas inlet with the APL valve placed at the patient end. During the expiratory phase, exhaled gases force the fresh gas back into the circuit and reservoir bag, escaping through the APL valve.

Mapleson C

Mapleson C has the reservoir bag positioned very close to the patient and can also be used for manual ventilation during resuscitation.

Mapleson D

Mapleson D is mainly used with ventilated patients, also known as a Bain circuit. Mapleson D circuits are coaxial. The fresh gas flow is close to the patient and the APL valve is placed away from the patient.

Paediatric & Neonatal Circuits

Paediatric (15mm tubing) and neonatal (10mm tubing) anaesthesia circuits are available in two types of tubing: corrugated and smoothore. Paediatric circuits are also available with Flexi-lock tubing.

Parallel Y-Piece

Standard paediatric Y-piece has 15mm tubing connectors and has a low dead space in comparison to an adult Y-piece.

Low Dead Space Y-Piece

Extra-low dead space Y-pieces allows the ventilation of even smaller patients, optional for paediatric circuits, standard on neonatal circuits.

Nitrous Oxide Circuits

Inhalation of a mixture of oxygen and nitrous oxide provides safe and effective pain relief during emergency care, childbirth and short, potentially painful procedures. Dedicated circuits provide accurate supply of oxygen/nitrous oxide mixtures.

Lightweight

Crush-resistant lightweight low resistance corrugated tubing that will maintain flow even when twisted through 180°.

Patient Choice

Nitrous oxide / oxygen circuits are available for use with a mouthpiece or mask providing patient choice.

Non-Return Valves

The T-Piece incorporates two non-return valves for gas delivery on demand and to prevent rebreathing of exhaled gases.

NITROUS OXIDE SYSTEMS

Breath by breath pain relief

An incorporated demand valve is regulated by the patients inspiration pattern allowing gases to be controlled and not lost to the environment, reducing costs and exposure of staff.

Anaesthesia Face Masks

Flexicare offers a wide range of single-use and re-usable anaesthesia face masks. The single-use masks have an inflated cushion that creates an excellent ventilation seal with high patient comfort. Standard masks are available without hooks, reducing waste.

Unscented Single-Use Anaesthesia Face Masks

Unscented pre-filled inflatable anaesthetic disposable face masks are available in a choice of sizes.

Scented Single-Use Anaesthesia Face Masks

Offered in three aromas: Lemon, Strawberry and Vanilla to help overcome the unpleasant smell of anaesthetic gases.

Silicone Reusable Anaesthesia Face Masks

Fully autoclavable up to 50 times. Textured moulded rim for maximum patient comfort and tight seal, with the transparent face piece for patient monitoring.

Cap Elbow

Swivel Elbow
with Elastomeric Cap

Smoothbore Catheter Mounts with Double Port Cap and Seal

Upper cap port seals for fibre optic scope insertion. The airtight flexible rim seal prevents loss of pressure from the system, maintaining ventilation during the procedure.

The lower cap closes with a snap fit. When open, the port is used for suctioning. The large 9.5mm diameter opening provides unrestricted access for suction catheters.

Either port is easily opened and closed with one hand, so the other hand can be used to insert the scope or catheter, making it a quick and easy single person procedure.

Spirometry Kits

Disposable Patient Spirometry Kits for use with enabled GE Carestations® and Carescape® modules.

SPIROMETRY KITS

Monitoring Line Amalgamation

Reduces clutter, with the ability to separate the gas sampling line should extra reach be required at both the sensor tube and monitor module end.

Lightweight Sensor Tubes

Monitoring line lengths ranging from 2m-6m means a convenient size is available.

Colour Coded Manifolds

For ease of set-up. Blue for sensor tube and White for monitor module.

Gas Sampling Line

Angled connector reduces risk of kinking and possible impingement against other equipment.

Flexicare's patient spirometry sets are compatible with all GE and Philips anaesthesia machines that offer a spirometry option. They are compatible with all of Flexicare's range of breathing systems and will monitor anaesthetic and airway gases, lung mechanics (volumes, flows and pressures).

VentiSorb®

VentiSorb® is a medical grade soda lime prepared in granulated form. The individual granules are specifically non-uniform in shape and size so that CO₂ absorption is maximised without restricting gas flow.

Colour Change Indicator

VentiSorb is available in two different colour options, giving clear visual indications of the level of active soda lime remaining available for CO₂ absorption. Both options conform to International Standards.

When exhausted, VentiSorb will change colour, indicating that the soda lime needs to be replaced. This should be used alongside CO₂ monitoring to confirm compound exhaustion.

- + Increased Moisture Output
- + Minimal Anaesthetic Agent Degradation
- + Improved Heat Retention

Specification	US Pharmacopoeia
Grade	USP
Particle Size	2.5mm-5.0mm
CO₂ Capacity	19wt% minimum

Tubing

Flexicare Tubing transports respiratory and medical gases to and from the patient via connections to other respiratory care medical devices and components.

Corrugated Tubing

Corrugated Tubing is characterised by its low compliance, crush resistance and light weight.

Smoothbore Tubing

Smoothbore tubing reduces turbulence, flow resistance and work of breathing in comparison with corrugated tubing. The kink resistant outer spiral supports tube patency ensuring delivery of fresh gas.

Flexi-Lock Tubing

Expandable tubing for greater flexibility within the operating room or for patient transport. The tubing can be expanded to the desired length and curved into specific positions without the need for tying down.

Smoothbore

Monitoring Lines

Monitoring lines are lines intended to channel samples of gases to determine EtCO₂ during critical and surgical situations. The line makes the connection between a sampling port and a capnograph.

Luersafe™ Monitoring Lines

The LuerSafe monitoring lines are developed to be used with connectors and devices that have the LuerSafe port. The port is closed when no line is attached and opens while connecting the LuerSafe monitoring line. The distinctive orange colour of the LuerSafe valve and monitoring line clearly indicates the correct corresponding connectors.

FL-10000 Respiratory Humidifier

Flexicare's Respiratory Humidifiers provide warmed and humidified inspired gases to patients requiring ventilation or respiratory support.

- + Accurate
- + Adaptable
- + Intuitive
- + Range of modes

Intuitive Set-up

FL-10000 intuitively guides you through the simple set-up process step-by-step, each option clearly displayed with large visual cues.

Select therapy and circuit type

Select the desired therapy mode and circuit type to meet your patient's respiratory requirements:

- Invasive/Non-Invasive modes
- Dual/Single Limb Circuits
- Heated/Non-Heated Circuits

Customised Care

Advanced features give complete control over temperature and humidity settings. Use the default temperature settings or access the password-protected advanced settings to adjust temperatures within the recommended range to suit your patient's needs.¹

¹ Humidification During Invasive and Noninvasive Mechanical Ventilation: 2012, Ruben D Restrepo and Brian K Walsh, Respiratory Care May 2012, 57 (5) 782-788

Touch screen humidification

The FL-10000 Respiratory Humidifier has an ergonomic touch screen user interface, is easy to operate and provides the information you need at a glance through a large LCD display.

Packed with advanced features.
Simple to operate.

SCAN HERE

3D VIEW

5.2" Touch Screen Interface

Easy to read high-contrast display even in direct sunlight.

Advanced Settings Mode

Allows you to easily set the required temperature outside the normal parameters for a continuous level of humidity to your patients.

Passcode Protection

Protect your custom settings with a 4-digit passcode to prevent unauthorised changes.

Intuitive Alarm Messages

FL-10000 displays clear on-screen fault diagnoses and alerts you with audible alarms.

Language Selection

FL-10000 can be setup to display 6 different languages. Available include English, Italian, French, Spanish, German and Dutch.

Warning Logs

Records a full list of warnings, alarms and errors for traceability.

FL-9000 Respiratory Humidifier

Simple to operate with intuitive controls and easy to select functions.

Misconnection Prevention

Easy-connect heated wire and temperature probe sockets of different design ensure correct connection.

Multi-Function Display

Clear easy-to-read LED Display with the option to check Airway, Chamber or Heater Plate Temperature, or hold on a custom setting.

Alarm Indications

Clear, colour coded visual and audible alarms notify the user of set-up errors, accidental disconnection during use or delivered temperatures outside the set parameters.

Variety of Circuit Options

Suitable for Invasive or Non-Invasive Ventilation, and Heated or Non-Heated Wire Breathing Systems.

Positive Connection

Heater Plate with spring loaded locking mechanism for secure placement of humidification chamber.

Watch Online

Our YouTube channel has a suite of helpful videos to demonstrate setup, cleaning and use of the FL-9000.

Humidification Chambers

Part of a complete system to actively warm and humidify inspired respiratory gases delivered to ventilated patients and those receiving respiratory support.

- + Clear construction
- + 22mm connectors
- + Red fill indicator
- + Removable safety cover

Optimal Humidity

Low water volume reduces initial warm up time and temperature fluctuations during use, providing consistent humidity levels.

Gas Flow Diverters

Diverters maximise gas flow through the chamber optimising humidity levels.

Heat Transfer

Flat base for complete contact with the heater plate for efficient, rapid and responsive water heating.

Overfill Protection

Primary and a secondary floats to regulate the flow of water and provide protection against overfilling.

Auto-Fill Humidifier Chamber

Double Valve Auto-Fill Humidifier Chamber

Manual Fill Humidifier Chamber

038-31-750A	Manual Fill Humidifier Chamber - without Tubing	20

VentiMyst® Heated Wire Breathing Systems

VentiMyst Advanced Active Humidification delivers absolute humidity and manages excess rain-out¹.

Excessive condensation within a breathing system can cause accidental drainage of rainout into patient's airway, resulting in Ventilator Acquired Pneumonia (VAP).

VentiMyst is the ultimate solution for moisture management, actively transferring moisture before it can become hazardous to patients, clinicians and equipment.

Standard Corrugated Heated Wire Limb
With rain-out pooling.

VentiMyst® Heated Wire Limb
Reduced build-up of rain-out.

¹ AARC Evidence-based clinical practice guidelines: care of the ventilator circuit and its relation to ventilator-associated pneumonia. Respiratory Care 2003;48(9):869-879.

VentiMyst®

Flexicare’s Dual Heated Wire Breathing Systems with VentiMyst technology deliver absolute humidity and manages excess rain-out.

VENTIMYST

Embedded Dual Heated Wire with VentiMyst

Heated wires are embedded in a reinforced spiral construction throughout the length of the smoothbore inspiratory limb, providing improved heat distribution in the wall of the circuit.

Reduced Risk of Contamination

Closed system and reduction in circuit breaks lowers the risk of contamination reaching the patient, clinician or ventilator.

Reduced Patient Risk

Minimises need to open or break the circuit to remove excess rain-out, therefore decreasing the risk of Ventilator Acquired Pneumonia.¹

Reduced Risk of Resistance

Less risk of increased resistance to gas flow from fluid build-up in the expiratory limb or filter.²

PART	DESCRIPTION	ADDITIONAL COMPONENTS	QTY
038-31-304	Adult Dual Embedded Heated Wire with VentiMyst (1.6m) - Kit 1	Y-Piece with MDI & Pressure Ports, VentiMyst Embedded Heated Wire Expiratory Limb, 0.5m Corrugated Limb, Pressure Line, 22M/22M, 15F Connector, 22F/22M Elbow, Auto-Fill Humidification Chamber	10

Heated Wire Breathing Systems

Low compliance Single and Dual heated breathing systems for Invasive and Non-Invasive therapies, delivering gas at optimal humidity and temperature to patients requiring respiratory support.

Double Coiled Heated Wires

All heated limbs feature a double coiled heated wire configuration to provide consistent warming of gas flow and limb wall to minimise possible rain-out.

Sterile Packed

All Heated Wire Breathing Systems are supplied sterile for superior patient safety.

BiPAP® Breathing Systems

Single Heated and Non-Heated Breathing Systems for patients receiving Bi-Level respiratory therapy. Available with Exhalation Valves and Pressure Lines, giving clinicians the ability to use with a wider variety of NIV machines and masks.

038-35-302
with Patient
End Filter

PART	DESCRIPTION	ADDITIONAL COMPONENTS	QTY
038-35-300	Adult Single Limb Smoothbore (1.8m) for BiPAP®	Exhalation Valve with Pressure Line	10
038-35-301	Adult Single Limb Smoothbore (1.8m) for BiPAP®	Exhalation Valve with Pressure Line, 1x Bacterial / Viral Filters (Machine End Only)	10
038-35-302	Adult Single Limb Smoothbore (1.8m) for BiPAP®	Exhalation Valve with Pressure Line, 2x Bacterial / Viral Filters (Patient & Machine End)	10

PART	DESCRIPTION	ADDITIONAL COMPONENTS	QTY
038-31-601	Adult NIV Single Limb Heated Wire (1.6m) for BiPAP® / CPAP - Kit 1	Exhalation Valve with 2.0m Pressure Line and In-Line Filter, 0.5m Corrugated Limb, 0.3m Unheated Extension Limb, Bacterial / Viral Machine Filter and Auto-Fill Chamber	10

Clic™ Closed Suction Catheters

Effectively clears patient airways of accumulated secretions improving respiratory function.

SCAN HERE

3D VIEW

Truly Closed System

Air in the sleeve of a traditional Closed Suction Catheter leaks during the insertion of the catheter, allowing viruses and bacteria to escape into the clinical environment.

Thumb Valve with Bacterial/Viral Filters

Clic features an easy to use thumb valve with built-in Bacterial/Viral Filters creating a secure barrier that filters the escaping air, protecting clinicians and patients against viruses and bacteria.

During insertion, air passing through the sleeve is vented through the filter adding another layer of protection for clinicians, the patient, caregivers, and the hospital environment.

99.9% Bacterial/Viral efficiency

2x filters add an additional layer of protection for caregivers and clinicians.

Reduced exposure of airborne contaminants

Reduced exposure of airborne contaminants to the caregiver during catheter insertion.

Enhanced cleanliness

Enhanced cleanliness supporting the overall extended use of the catheter system.

Clic Closed Suction Catheter maintains a continuous closed ventilation system, protects ventilation and pressure levels, and reduces risk of cross-contamination and Ventilator Associated Pneumonia (VAP).

- + Built-in Bacterial Viral Filters
- + Double Swivel Adapter
- + Optional MDI Port
- + PRN Change, Up To 7 Days

OmniOx HFT700

The OmniOx HFT700 combines the ability to deliver High Flow Nasal Oxygen Therapy, CPAP and Bi-Level ventilation with humidification and an Oxygen blender integrated within a single device.

The OmniOx provides the combined solution to deliver simple, effective integrated non-invasive respiratory support. High Flow Nasal Oxygen Therapy presents many advantages and is the first line treatment for many patients with Acute Respiratory Failure¹.

Patient compliance to maintain consistent therapy and pressures remains a challenge, but the capability of switching from HFOT, CPAP and Bi-level pressure support for patients struggling with PAP adherence² can improve patient comfort and therapy compliance.³

Intuitive control

5" colour TFT LCD touch screen ensures easy to use, intuitive control with two-touch access to change therapy, input unique patient settings, set alarms and review controls.

Adaptable

Compact, versatile, single unit device for use in acute wards, critical care, emergency departments and recovery rooms. Integrated gas flow generator enables stand alone cylinder attachment when piped oxygen is unavailable.

Critical

Essential real-time monitoring enables delivery of FiO_2 . Controlled Target SpO_2 Feedback. Monitoring functions include: FiO_2 , SpO_2 , Respiratory Rate, Heart Rate, Airway Temperature & Oxygen Flow Rate.

Simple

Controlled by a simple touch screen, switching from one mode to another with two on-screen commands.

High Flow Oxygen Therapy Breathing Systems

Smoothbore inspiratory limbs with embedded heated wires in a reinforced spiral construction. Delivers optimal humidity and manages excess rain-out.¹

EMBEDDED SINGLE LIMB CIRCUITS

Take back control of humidity

The embedded heated wire throughout the length of the inspiratory tube reduces build-up of rain-out in the circuit compared to conventional heated wire circuits.

This provides improved heat distribution in the wall of the breathing circuit, minimises cold spots, maintains gas temperature and humidity levels.

¹ MV Pravin Charles, et al. Ventilator-associated pneumonia. Australasian Medical Journal. 2014; 7(8): 334–344.
² A. R. Wilkes. Heat and moisture exchangers and breathing system filters: their use in anaesthesia and intensive care. Part 2 – practical use, including problems, and their use with paediatric patients, Anaesthesia, 2011, 66, 40–51.

To deliver respiratory gases at optimal temperature and humidity to the patient during High Flow Oxygen Therapy, Flexicare offers our single limb heated wire breathing system in Neonatal, Paediatric and Adult configurations to address the needs of each individual patient, enhancing patient care and improving clinical outcomes.

Reduced Patient Risk

Reduced risk of accidental drainage of rain-out into the patient's airway.²

Low Compliance Tubing

Accurate delivery of gas volumes and ventilation pressures to the patient.

Temperature Transfer Efficiency

Helps prevent gas temperature loss and surface cold spots, minimising rain-out.

Veoflo[®] High Flow Nasal Cannula

For patients with mild to moderate respiratory distress syndrome, Veoflo High Flow Nasal Cannula is the comfortable choice for effective delivery of High Flow Oxygen Therapy (HFOT)

Soft Contoured Nasal Prongs

Comfortable and well tolerated silicone prongs aid patient compliance.

Adjustable Tube Placement

Detachable smoothbore tube and plug so the tube can be comfortably placed on either side.

Wide Bore Nasal Prongs

Allows delivery of flow rates up to 60 l/min without increasing resistance.

MRI Safe

Fully metal-free making Veoflo safe to use in the MRI suite.

Quick and Secure Setup

Wings on the swivel connector for easy connection and disconnection.

Wide Elastic Split Head Strap

Easy to adjust, provides a secure fit and increased patient comfort.

Veoflo Tracheostomy

Tracheostomy Interface facilitates the delivery of humidified respiratory gases to spontaneously breathing patients with bypassed upper airways.

Veoflo Adaptor

Available as an individual item or as part of a Veoflo kit.

VEOFLO	VEOFLO + ADAPTOR	DESCRIPTION	QTY

High Flow Nasal Cannula

Lightweight, flexible tubing combined with soft contoured nasal prongs ensures a comfortable fit enhancing therapy compliance.

Soft Touch Tubing

Gentle on the ears and face, minimising friction and pressure on delicate tissues.

Adjustable Slider

Secure and comfortable fitting without the need for a head or neck strap.

Secured Oxygen Delivery

Star lumen tubing ensures the flow of oxygen is maintained even if the tube becomes kinked.

High Flow Nasal Cannulas offer many advantages when used in conjunction with humidification, including accurate delivery of high FiO_2 and optimised mucociliary clearance, while increasing alveoli recruitment in a technique that offers improved patient comfort and compliance.

Nioflo™ Nasal Cannula

A premium cannula for the accurate delivery of high and low flow humidified gases, optimising mucociliary clearance, increasing alveoli recruitment and improving patient comfort and compliance.

NIOFLO NASAL CANNULAS

Protecting our most vulnerable patients

NioFlo's flexible design allows the care provider to avoid the over the ear style of cannulas that lead to tissue breakdown.

Ears are the most common site for Medical Device Related Hospital Acquired Pressure Ulcers (MDR HAPU), with 35% of affected patients suffering tissue breakdown in this sensitive area.¹

Unique Swivel Design

Additional flexibility with swivel design connector to reduce torque on cannula.

Adjustable Slider

Secure and comfortable fitting without the need for a head or neck strap.

Maximum Compatibility

Included adapter provides a secure connection to both 15mm and standard O₂ tubing.

VentiMask®

Ventimask delivers High Flow Oxygen Therapy to patients who are unsuitable for a High Flow Nasal Cannula (HFNC), such as those with blocked nasal passages or following trauma/surgery to the nasopharynx.

Large capacity mask with exhalation vents reduces air dilution, improves CO₂ washout and prevents pressure build-up.

Humidity Adaptor

The humidity adaptor is an accurate method of delivering fixed concentration, humidified High Flow Oxygen Therapy to a patient when used with Ventimask, Venturi barrel and Single Limb Heated Wire Breathing System.

PART	DESCRIPTION	QTY

Bubble CPAP System

Provides consistent and accurate delivery of Continuous Positive Airway Pressure and warmed, humidified inspiratory gases to spontaneously breathing neonates and infants requiring respiratory support.

- + Pressure relief valve promotes patient safety
- + Expiratory limb swivel connector prevents pressure loss or accidental disconnection
- + Positive connection and setting lock prevents changes of PEEP level.
- + Funnel design to reduce the risk of spillages

The design of the Flexicare Bubble CPAP simplifies the process of CPAP setup with numerous safety features, allowing the clinician to focus on their patient's needs.

Secure CPAP Pressure Range

The CPAP probe is locked when a pressure is set; reduces risk of inadvertent pressure setting change.

Detachable Overflow Chamber

Easily emptied without interruption of CPAP.

Secure Seal

A primary seal regulates the flow of water into the chamber and provide assured protection against overfilling.

PART	DESCRIPTION	ADDITIONAL COMPONENTS	QTY
038-33-180	Bubble CPAP System Kit 1	Single Heated Wire (1.6m), 0.3m Incubator Extension, Corrugated Expiratory Limb, Ported T-Piece, 8M/15M Connector, 10M,8F/15M,11F Connectors, Universal 22mm Connector, Pressure Relief Valve 40cmH ₂ O, Auto-Fill Chamber, Bubble CPAP Generator	10

Infant Nasal CPAP

Soft, anatomically curved nasal prongs and a knitted cap with adjustable fastenings, providing an optimal fit and effective seal for infants receiving CPAP therapy.

Atraumatic

Anatomically curved soft silicone cannula with depth markings in a range of 7 sizes for a secure and leak-free fit to maintain CPAP and minimise the risk of tissue damage.

Secure Positioning

Securing straps on the soft knitted cap help position the circuit tubing, reducing the risk of cannula movement.

Barr-Vent

Intended to help prevent the transmission of bacteria and viruses and reduce cross infection to and from the patient during anaesthesia, artificial respiration and other types of assisted ventilation such as in the critical care environment.

- + Colour coded red, to indicate filtration only
- + Electrostatic filter material with excellent filtration properties
- + Different sizes and shapes, for different applications

Barr-Vent Filters are respiratory filters that protect patients and clinicians against bacterial and viral infections. The electrostatically enhanced filter material effectively forms a barrier, reducing the risk of cross-contamination without compromising the resistance to the flow of air.

Hygrovent

The Hygrovent HMEFs are respiratory filters with an integrated heat and moisture exchanger. The electrostatically enhanced filter protects patient and clinician against bacterial and viral infections.

- + Colour coded blue, to indicate filtration and humidification properties
- + Luer Lock connection for gas sampling

Effective Humidification

The heat and moisture exchanger effectively warms and moistens the air to be inhaled.

Various Sizes

Hygrovent HMEF offers different sizes to meet different patient requirements.

HME Booster

Located close to the patient, the innovative HME Booster is a unique solution to provide heat and humidity to the patient without relying on conventional active humidification systems.

High Performance Delivery

The HME Booster delivers not only heat and moisture directly to the patient with every inspired breath, but during exhalation it also increases the performance of the HME for the next respiratory cycle.

Effective Humidification

The system consists of a high-performance HME filter with heating element and a water source adapter. The heating process causes evaporation, which warms and humidifies the air. The extra heat and moisture in combination with the HME provide excellent humidification levels.

Multi Use

Durable and reusable heater is available with different power configurations for multiple regions.

Hygrovent Gold*

Hygrovent Gold combines the simplicity of an HME with the benefits of active humidification. The easily placed heating element adds additional heat and moisture to the inspired gases. Clinically proven to increase humidity levels in mechanically ventilated patients¹.

HME Booster T-piece Sets*

Sterile, single-use HME Booster configurations are available to fit your specific needs. Each set consists of a Hygrovent S HME filter and a HME Booster T-piece.

*HME Booster not included. Shown for illustration.

Climavent™

Climavent Heat and Moisture Exchangers (HMEs) contain a heat and moisture exchange medium. They are used to warm and humidify the patient’s inspired gases. The HME media retains some of the patients exhaled heat and moisture using that to passively warm and humidify the air inspired in the next breath. They are normally positioned at the patient end of a breathing system.

Effective Humidification

The heat and moisture exchanger effectively warms and moistens the air to be inhaled.

Various Sizes

Climavent offers different sizes to meet different patient requirements.

Neonatal HME(F)

A heat and moisture exchanger designed to replicate the functions of the body's upper airway by effectively warming and moistening the air to be inhaled by the patient.

PART	DESCRIPTION	QTY
038-43-150	Neonatal HME Sterile	25
038-43-355	Neonatal Bacterial / Viral Filter and HME (with Lock Port and Tethered Cap)	50

HF55

The HF55 is a bacterial/viral filter with integrated HME. It has the optimal balance between humidification properties, filtration, resistance to flow and internal volume.

STERILE	NON-STERILE	DESCRIPTION	QTY
HF55	HF055	HF55 HME filter (with Luer lock port, capped)	50

ThermoTrach™

Light-weight Heat Moisture Exchanger (HME) for spontaneously breathing patients fitted with a tracheostomy tube.

- + Clear housing permits visual examination for potential occlusion
- + Humidifies oxygen before reaching the patient

Swivel Oxygen Connector

Supplementary oxygen can be provided by attachment to the ThermoTrach swivel oxygen connector which can be angled to the most convenient and comfortable position, reducing the risk of disconnection, kinking and drag against the patient.

Corrugated Paper Media

The white colour HME media makes it easy for carers to see any contamination of the media and change before a problem arises.

The airway can be cleared by inserting a suction catheter through the integrated self-sealing suction port. The port also acts as a vent that can open during vigorous coughing to allow thick mucosal secretions to be expelled, avoiding blocking of the airway.

ThermoTrach
HME with Vent and Swivel Oxygen Port

Climatrach

Climatrach HME is a heat and moisture exchanger that takes over the function of the upper airways in spontaneously breathing patients with a tracheostomy.

- + Small, inconspicuous size
- + Round design

Patient Comfort

Effectively warms and humidifies the inhaled air by the HME medium.

Safety Valve

The optional safety valve opens when the internal pressure temporarily becomes too high and closes when the pressure reaches normal value again.

Unique Design

The unique design combines excellent performance with a lightweight construction for extra patient comfort.

038-41-396	Pulmonary Function Test Filter with Oval Mouthpiece	50

MediFlo Duo

Single patient use breathing excerciser used for Sustained Maximal Inspiration (SMI) and Positive Expiratory Pressure (PEP) breathing exercises.

Your personal trainer for improved lung function.

Patients recovering from thoracic and upper abdominal surgery, or those that require prolonged in-bed recovery, benefit from respiratory exercises to improve ventilation and prevent lung complications. Performing breathing exercises with the MediFlo Duo is physiologically comparable with sighing and yawning.

Resistance to flow is easily adjusted to perfectly fit each patient's physical ability. Monitor improvement with the resistance indicator scale and increase therapy compliance.

With only a few adjustments the MediFlo Duo can be transformed from a respiratory exerciser for inspiration exercises to a breathing trainer for expiration exercises.

Positive Expiratory Pressure (PEP)

An exhalation exercise performed by slowly breathing out against an expiratory resistance.

Sustained Maximal Inspiration (SMI)

An inhalation exercise performed by breathing in as slowly, continuously and deeply as possible.

PART	DESCRIPTION	QTY
700 000 000	Mediflo Duo Breathing Trainer	20

Peak Flow Meter

Highly accurate, lightweight and portable peak flow meter for asthma management. Designed for use in clinics, general practice, sports medicine and home use; providing convenience wherever you are.

- + Integrated oval mouthpiece
- + Suitable for adults and children

The effective management of asthma relies on early identification of the threat of potential exacerbations. The ability to respond promptly depends on close monitoring of peak flow to help protect quality of life and optimise the efficacy of medication.

Easy Set-Up

The zone markers may be set with a stylus by the healthcare professional to give the personal boundaries for implementing the asthma action plan.

50-800 L/min Range

Easy-to-read scale that simplifies patient self-monitoring, measuring between 50-800 litres per minute.

Lightweight & Portable

The protective sleeve securely shields the Peak Flow Meter from scratches or damage when travelling.

PART	DESCRIPTION	QTY
VIT43911	Peak Flow Meter	25

Dual

Dual Masks and Nasal Cannulas simultaneously deliver supplementary oxygen and enable EtCO₂ monitoring when using a sidestream or Microstream™ capnometer.

Guidelines¹⁻⁷ require EtCO₂ monitoring of all moderately or deeply sedated patients, for patients being recovered from anaesthesia or moderate or deep sedation, and during CPR to monitor ET tube placement, efficacy of chest compressions and early indication of return of spontaneous circulation.

END-TIDAL CO₂ MONITORING & O₂ DELIVERY

Delivering accuracy with every breath

Dual Mask has been proven to be the most efficient in sampling end tidal CO₂ in an independent comparative study⁸ in a simulated patient.

Easy Fit with Good Seal

The soft, pliable mask moulds easily to the patient's face, with a feathered-edge rim for maximum comfort.

Comfort and Security

Oxygen tubing and monitoring line are lightly bonded together, but can be separated to reach the flow meter and capnometer, minimising clutter around the patient.

Patient Comfort

Soft Touch tubing reduces friction for increased comfort over the ears and across the face.

Male Luer

Female Luer

Dual Mask

Dual Mask provides continual monitoring of carbon dioxide exhaled from both mouth and nose whilst delivering supplementary oxygen.

Pre-fitted oxygen and sampling lines makes set-up quick and easy.

Dual Nasal Cannula

Oxygen is delivered to both nostrils via the lower ports and EtCO₂ is sampled from both nostrils for sidestream or Microstream™ CO₂ monitoring through the upper prongs.

During exhalation, oxygen flow is diverted away for an accurate and reliable capnography trace.

Protection for Patient and Equipment

The Comfort Rest Bite Block fits securely and comfortably in the mouth, protecting both the patient's teeth and endoscopy equipment.

Care from Procedure to Recovery

Detachable Dual Nasal Cannula can be used for pre-procedure oxygenation or to continue delivering O₂ and monitor CO₂ post-procedure in recovery without need for additional devices.

All-In-One Kit

DualGuard incorporates: a Comfort Rest Bite Block, Detachable Dual Nasal Cannula, LuerSafe Oral Monitoring Line, O₂ Tubing, and Adjustable Head Strap in one complete kit.

VentiMask®

Clinically proven that “only the VentiMask is able to provide a fixed and predictable oxygen concentration under conditions of the changing ventilatory patterns found in clinical practice.”¹

Venturi Barrels

A choice of 6 Venturi barrels to provide a fixed concentration of oxygen offers a convenient and cost effective option to meet the individual patient's requirements.

Large Capacity

Large 280ml capacity acts as an oxygen reservoir and maximises accuracy. Also reduces any feeling of claustrophobia, improving therapy compliance.

Exhalation Vents

The number and position of the vents enhance CO₂ washout and prevent pressure build-up in the mask.

Soft and Flexible

The masks seals comfortably to the face without pressure points. Horizontal Gas Flow minimises irritation and drying of the eyes.

Medium Concentration Masks

Soft and pliable mask that moulds easily to the patient's face, with a feathered-edge rim for excellent fit and seal to provide maximum comfort and efficacy.

Patient Comfort

Knitted latex free strap maintains its width when stretched and reduces pressure on patients' skin, helping protect from pressure sores.

Clear Observation of Face Colour and Vitals

Clear and colourless mask for quick and easy assessment of potential cyanosis.

Soft and Flexible

The masks seals comfortably to the face without pressure points. Horizontal Gas Flow minimises irritation and drying of the eyes.

Swivel Connector

The connector can be rotated to the most convenient and comfortable position, accommodating for patient movement and oxygen supply from either side.

Strap Options

Choose headstrap or earloops, ideal for patients with restricted head movement or find the strap behind the head uncomfortable.

Stepped Oxygen Inlet

Quick, easy and secure connection to oxygen tubing.

Nasal Cannulas

Soft Touch Nasal Cannula for the delivery of low-flow supplemental oxygen. Flexible tubing minimises friction and pressure on the skin reducing the risk of tissue damage and pressure ulcers.

Better Care with Reduced Costs

Soft Touch tubing minimises stresses on the ear and facial tissue, reducing the potential for skin breakdown and associated costs. Soft Touch tubing avoids the need for uncomfortable, bulky foam ear guards or cushions which can retain moisture and potentially become a reservoir for infection.

- + Improved Patient Compliance
 + Less Bulky than Ear Guards
 + Avoids Additional Treatment Costs

Non-Rebreathing Mask

The first choice for high oxygen concentration delivery to spontaneously breathing patients in an acute medical emergency. One way valves on mask minimise room air entrainment ensuring patient receives highest levels of oxygen. Available with a safety port to facilitate room air entrainment into mask if oxygen supply becomes blocked, allowing the patient to breathe normally.

Reduced Risk of Patient Trauma

Elasticated earloop option on the adult mask eliminates the need for the patient's head to be moved to fit the mask, reducing risk of further injury.

Reduced Risk of Bag Occlusion

Castellations on the swivel connector ensures flow of oxygen from bag to patient is uninterrupted.

Ease and Speed of Fitting

Mask is fitted quickly and easily with the swivel connector rotated to suit the patient's position.

Tracheostomy Mask

Contoured for an effective seal and a 360° swivel connector for maximum patient comfort. The 22mm connector fits to corrugated tubing and can deliver humidified oxygen when used with a venturi and humidity adaptor.

PART	DESCRIPTION	QTY
032-10-091	Adult Tracheostomy Mask	50
032-10-092	Paediatric Tracheostomy Mask	50

Bubble Humidifier

Safe and easy to use active humidification, recommended when oxygen is delivered in excess of 4 l/min.

Increased Humidification

The fine diffuser at the inlet tube end produces very small gas bubbles that maximise the surface area, providing increased humidification with a low noise level, reducing patient disruption.

Safety Pressure Relief Valve

Pressure relief valve automatically opens at 6psi or 4psi should the outlet line become occluded.

PVC Nipple Diffuser

For home use, the PVC nipple diffuser extends the life of the humidifier and minimises risk of blockage.

PART	DESCRIPTION	QTY
032-10-089	Bubble Humidifier 400ml with Fine Diffuser and 4psi Safety Valve For Hospital Use	20

MaxiNeb® Duo

A high performing, dual mode nebuliser which provides the clinician and patient with the ability to instantly switch between patient controlled or continuous treatment, improving patient comfort, increasing caregiver and surrounding environment safety and reducing medicine wastage.

Patient Controlled Mode

Press/release the trigger to start/stop the treatment.

Continuous Mode

Press the trigger and engage the snap lock for continuous treatment.

Unique Design

Unique valve and filter design reduces medicine wastage. The patented dual mode improves patient comfort with the ability to switch between continuous or patient controlled treatment.

Expiratory Filter

Bacterial/Viral filter reduces the expiration of the aerosolised medicine, trapping bacteria and viruses reducing the risk of cross contamination and protecting caregivers and the clinical environment against aerosol inhalation.

Breath Enhanced Technology

When the patient inhales, the unique design of MaxiNeb Duo allows more air to enter the nebuliser, speeding up the circulation of the mist, enabling the treatment to immediately pass to the patient.

MaxiNeb® Nebulisers

Intended to convert suitable liquid medication into a mist of fine particles for inhalation by a patient with the intent that the particles be deposited directly into the lower airway. MaxiNeb nebulisers have a low Dead Volume, short nebulising time, optimal MMAD and high percentage of aerosol mass in the Respirable Range.

MaxiNeb

MaxiNeb is a high output nebuliser which delivers medication quickly and efficiently.

MaxiNeb 90

Features all the benefits of MaxiNeb, but functions at angles up to 90°, making MaxiNeb 90 ideal for recumbent patients.

Patient Choice

Attaches to either an aerosol mask, mouth piece or T-Piece, for a wide choice of delivery options.

Anti-Spill Design

Easy ¼ turn cap creates a secure leak-proof seal and the wide tripod legs keeps MaxiNeb stable and upright, even on uneven surfaces.

Clear Chamber

Graduations aid drug dilution and monitoring the nebulisation process through to completion.

RESUSCITATION

Single-Use Manual Resuscitators

Ergonomic, single-use Manual Resuscitators with higher levels of Oxygen delivery and pre-fitted components in quick-to-open packaging, provide fast effective care, even in the most difficult situations.

- + Single use
- + Latex free
- + DEHP free

SCAN HERE

3D VIEW

Available with a range of ports and optional accessories.

CO₂ Monitoring Port

Located close to the patient airway for a maximum capnography trace accuracy and reliability. The capless self-sealing port eliminates gas leak risk when not in use.

MDI Port

Angled MDI port directs medication into patient airway, maximising effectiveness and reducing waste.

Optional Manometer

Available in-pack or as a separate item, the single-use manometer gives a breath-by-breath read-out of delivered pressures.

Optional Adjustable PEEP Valve

Adjustable from 5 - 20cmH₂O, the PEEP valve fits in place of deflector cap without the need to remove the mask or interrupt ventilation.

Grip & Control

Textured surface and optional strap gives grip and control of the ambidextrous bag, even when wearing gloves and in wet conditions.

Lightweight Construction

Low resistance valves and fast recoil non-PVC bag reduce user fatigue, even during lengthy ventilations.

Immediate Ventilation

Quick-to-open packaging and pre-fitted mask minimise set up time. Additional devices can be fitted without removing the Resuscitator from the patient.

Optional Strap

Facilitating single handed bag use, the adult bag strap frees the other hand to secure the mask or airway device. Double handed compression possible if required.

Colour Coded Pressure Relief Valve

Located centrally, the Pressure Relief Valve can be operated by either hand and the setting is visible from both sides and above.

Tamper-evident Packaging

Sealed in a clear carry bag for convenient storage. Tear-off strip assures contents are uncontaminated. Resealable after use for safe disposal of contaminated items.

Clear Valve Assembly

Unrestricted view of correct valve function, and reduced bulk so the user can verify mask or airway position and observe the patient.

Double Swivel Patient-End Connector

The Valve Assembly rotates 360° in two axes for an effective mask seal and bag position, whatever the approach angle.

Textured Reservoir Bag

The non-stick textured inner surface ensures complete inflation and correct bag function.

Reusable Manual Resuscitators

Manufactured from high quality materials that can be autoclaved up to 50 cycles. The range, design and performance characteristics mirrors those of our single-use resuscitators.

Available with a range of ports and optional accessories.

MDI Port

The MDI port is angled to direct medication into the airway, maximising effectiveness and reducing waste.

Optional Manometer

Attaching the single-use manometer gives breath-by-breath indication of delivered pressures.

Optional Adjustable PEEP Valve

Adjustable from 5 - 20cmH₂O, the PEEP valve replaces the deflector cap without the need to remove the mask or interrupt ventilation.

Optional Strap

Facilitating single handed bag use, the adult bag strap frees the other hand to secure the mask or airway device. Double handed compression possible if required.

Colour Coded Pressure Relief Valve

Located centrally, the Pressure Relief Valve can be operated by either hand and the setting is visible from both sides and above.

Tamper-evident Packaging

Sealed in a clear carry bag for convenient storage. Tear-off strip assures contents are uncontaminated. Resealable after use for safe disposal of contaminated items.

Clear Valve Assembly

Unrestricted view of correct valve function, and reduced bulk so the user can verify mask or airway position and observe the patient.

Double Swivel Patient-End Connector

The Valve Assembly rotates 360° in two axes for an effective mask seal and bag position, whatever the approach angle.

Textured Reservoir Bag

The non-stick textured inner surface ensures complete inflation and correct bag function.

NeoPIP™ Infant Resuscitator

Lightweight and durable, the NeoPIP™ Infant Resuscitator provides controlled and accurate resuscitation and ventilation of neonates and infants up to 10kg.

**Make those first breaths
a little easier.**

Studies show that 10% of Newborns
require assistance to begin breathing.¹

3D VIEW

Accurate Pressure Management

The NeoPIP Infant Resuscitator, delivers safe and precise ventilation at a touch for our most vulnerable patients.

Large Manometer

Large easy-to-read dial aids set-up and clearly shows delivered pressures during use.

Adjustable Controls

NeoPIP's adjustable maximum pressure relief (pop-off) valve and Peak Inspiratory Pressure (PIP) controls quickly and safely set the required levels.

Universal Mounting Bracket

Can be mounted on vertical or horizontal Vacuum Brackets, IV Poles, or DIN or Dovetail Rail Systems.

Precise Pressures

Safe and consistent Peak Inspiratory Pressure (PIP) can be delivered for every breath with controlled delivery.

Accurate Delivery

Used with a blender and flow meter, NeoPIP™ delivers accurate oxygen concentrations of up to 100%, with flow rates of up to 15L/min.

Lung Protective Delivery

Provides consistent, controlled resuscitation breaths to help prevent over-distension of the lung.

Durable and Dependable

High quality, durable aluminum casing with recessed metal fittings in sleek design.

Secure Connection

NeoPIP™ has a metal gas inlet which connects securely to standard oxygen tubing.

Universal Connection

Standard 15mm Female Connector accepts standard Infant Resuscitator T-Piece Circuits without the need for an adapter.

PART	DESCRIPTION	QTY
NF-100	NeoPIP™ Infant Resuscitator	1
NF-101	NeoPIP™ Universal Mounting Bracket	1

Single-Use Resuscitator T-Piece Circuits

For manually controlled ventilation and resuscitation of neonates and infants. Suitable for use in Labour and Delivery Units, NICU and Infant Transport.

Precise PEEP

Easy-to-adjust PEEP control valve rotates to set the exact pressure and remains constant during prolonged use.

Accurate Reliable Delivery

Low compliance tubing with shallow corrugations for minimal flow resistance and accurate pressure delivery.

Small, Coloured T-Piece Design

Blue T-Piece colouring makes the circuit easily visible at the bed side, the shortened length decreases the deadspace while making it easier to hold.

Controlled Oxygenation

Finger/thumb port to control inspiration and expiration, by placing the thumb/finger over the port to deliver 21% - 100% or free-flow oxygen.

Device Connectivity

The universal connector fits seamlessly with all popular resuscitation units without the need for an adapter.

Optional Filter

Adds 99.99% bacterial and 99.9% viral protection.

NF-171-10	Resuscitation Face Mask Single Use Anatomical with Pre-Inflated Cushion Infant Size 1	10

Pocket Resuscitation Mask

Mouth to mask ventilation for non-breathing patients. The mask features a pre-filled cushion to provide maximum seal and includes an integrated bacterial/ viral filter to protect both user and patient.

Durable Carry Case

Protects the mask until required - easy open release catch to minimise any delay.

Oxygen Port with Cap

Port for delivery of supplemental oxygen. Avoids the need to change mask during transportation.

Non-return Valve

One-way valve prevents vomit or other body fluids reaching the user, but allows exhaled breath to escape.

+ Pre-filled cushion

+ BVM Compatible

SUCTION CATHETERS

SUCTION CATHETERS 131

SUCTION TUBING

131 SUCTION TUBING

Suction Yankauers

Effective suction without aspiration of surrounding tissue, and a choice of with or without fingertip vacuum control. Transparent, with a smooth inner lumen for uninterrupted suctioning and rapid passage of material.

Rosebud Tip

Straight Tip

Continuous Suction

The lateral eyes positioned near the tip for continuous and easy suctioning.

Optional Vacuum Fingertip Control

Port at the distal end of the handle gives fingertip / thumb control over the vacuum level.

Occlusion Discernibility

Blockages or obstruction are easily seen through the transparent tube. The smooth inner lumen helps maintain the level of suction.

Suction Catheters

A smooth outer surface, rounded tip to reduce risk of injury and soft edges to the double sided eyelets positioned to prevent blockages, makes the sterile Suction Catheter ideal for Oral, Tracheal or Endobronchial suctioning. Available as Standard or with Vacuum Control.

Smooth Clear Main Tube

Smooth outer surface for easy insertion through all types of endotracheal and tracheostomy tubes.

Vacuum Control

Fingertip port gives the user control over the vacuum level.

Wycath Intermittent Catheters

Wide range of intermittent catheters for bladder drainage and stricture therapy. We provide a range of Standard, Female and Paediatric lengths meeting all patients requirements.

Our selection of tips are available to navigate even the most difficult tracts and are available across the Wycath range, providing the ideal catheter for each patient.

Standard

Tiemann

Tapered

Soft Tip

Hydrophilic or Uncoated

Our sterile catheters are supplied in a choice of hydrophilic or uncoated catheters in easy to open packaging.

Colour Coded

All our catheters and meatal dilators are colour coded for easy size recognition.

Step-by-Step Catheter Guides

Helping patients keep track of catheterisation and guide them through the procedure with ease. Visit myflexicare.com for free downloads and videos.

Hydrophilic

Our sterile Hydrophilic coated catheter comes with our Wycath water sachet sealed inside the packaging. Simply press the button to release the water before insertion. Easy to open for patients with dexterity difficulties and supplied in a range of tips.

Leg Bags

Contoured to offer a comfortable fit whilst distributing urine evenly, giving patients confidence wherever they are.

Our leg bags are available in short (7cm) or long (30cm) tube lengths and for those requiring a customised length, we offer a 500ml capacity bag with an extra-long adjustable length tube (60cm).

Needle-Free Sample Port

Our sample port eliminates the risk of needle stick injury and the smooth exterior reduces potential marking of the skin and visibility under clothing.

Secure Connection

Our stepped connectors are featured on all our leg bags offering secure and reliable connection to catheters and drainage bags.

Easy to Operate Taps

The lever taps fitted to our leg bags are 180 degree, 2 stage action taps. Easy to operate and reducing the risk of accidental opening.

Standard Leg Bags

Our standard leg bag is contoured offering an improved and comfortable fit while distributing urine evenly.

Discreet Leg Bags

Our Discreet leg bags are a neutral colour with white print, reducing visibility through clothing.

Non-Return Valve

All our drainage bags are fitted with a non-return valve (NRV) as standard.

Date and Use Box

Clear indications of use and a date box allow information to be recorded on all our bags.

Range of Lengths

Available in 350ml, 500ml and 750ml with a choice of tube lengths.

F4 Drainable

Our drainable urine bags provide a robust and versatile urine drainage solution for both hospital and community environments. All drainable 2 litre bags are fitted with a non-return valve to prevent urine reflux.

Free and Rapid Flow

Our soft wide bore drainage tubing allows unimpaired flow of urine and comfort against the skin.

Lower Profile

The F4LS side tap lowers the profile of the drainage bag and moves the tap clear off the floor to prevent accidental contamination.

Needle-Free Sample Port

The needle-free sample port eliminates the risk of needle stick injury.

Easy to Operate Taps

The F4 bags are fitted with a choice of a lever tap or T-tap. Both taps are simple and easy to operate.

F4 Plus

The F4 Plus bag is primarily used with patients who have undergone surgery. It has an integral hanger and a pasteur drip chamber to observe urine drainage.

- + Drip chamber reduces risk of ascending infection
- + Secure fit for catheters
- + Kink-resistant tubing

Enclosed Tap Protector

The lever tap can be placed in the protective tap holder which keeps the outlet clear of possible contamination from the floor whilst protecting against accidental opening.

Hydrophobic Filter

The F4 Plus hydrophobic filter prevents air building up in the bag without allowing proteins or fluids to pass through.

Non-Return Valve

The F4 Plus bag is fitted with a second non-return valve preventing the contents of the bag returning to the drip chamber, eliminating reflux and providing directional flow of fluids.

Integral Bag Hanger

The hanger can fit securely to any bed. The inlet tube is maintained in position to allow for direct flow into the drip chamber.

PART	DESCRIPTION	QTY
00-1208	Post Operative 2L Drainable Bag with Drip Chamber and Hanger	20

F2

Provides a clean and safe method of urine drainage. F2 is a high quality bag that is simple and easy to use, assuring confidence to clinicians and comfort for users.

The simple and easy-to-use tear mark can be used to open and drain the bag when needed. After use, the bag can be easily disposed of making the F2 an ideal bag for use in both hospital and community settings.

F2EZ

Designed to be opened quickly whilst allowing controlled drainage of fluids. The bag is designed with a simple twist-snap tap to enable the urine to be directed and emptied easily.

The Twist-snap tap is located either at in the top corner of the bag to offer a 'jug' effect and greater control when emptying, or by the bottom of the bag offering vertical drainage.

Safe and Secure Drainage

The non-return valve (NRV) is designed to allow low pressure drainage in one direction while preventing flow in the opposite direction, reducing the risk of ascending infection.

Secure Connection

Our stepped connectors are featured on the F2-EZ and F2-EZB offering secure and reliable connection to catheters and drainage bags.

Twist-Snap Tap

The innovative easy-to-open angled connector with wide bore for rapid drainage is twisted to break the seal and drain.

PART	DESCRIPTION	QTY
00-2201	F2 2L Non-Drainable Bag Non-Sterile	250
00-2202	F2 2L Non-Drainable Bag	100
00-2203	F2-EZ 2L Once Drainable Bag with Twist-Snap Tap Non-Sterile	100
00-2208	F2-EZB 2L Once Drainable Bag with Bottom Twist-Snap Tap Non Sterile	100

Urimeter

Sterile closed collection system with an integral measuring chamber. The vertical drainage system and incorporated non return valves (NRV's) ensure the measuring chamber empties fully once the reading has been taken to ensure accurate measurements especially with low urine output.

Clear print and date box

Clear indications of use and a date box allow information to be recorded and use monitored.

Vertical Drainage

The vertical drainage ensures accurate measurements.

Secure Fastening

The integral hangers and straps ensure the Urimeter is securely attached to any bed frame.

Enclosed Tap Protector

The lever tap can be housed in the holder when not in use to prevent the tap touching the floor or being accidentally opened.

Hydrophobic Filters

The hydrophobic filter allows for the air and any gas build up in the bag to escape without allowing proteins or fluids to pass through.

Safe and Secure Drainage

Non-return valves reduce the risk of ascending infection and allows low pressure drainage without compromising the anti-flux property.

PART	DESCRIPTION	QTY
00-1227	Urimeter 1.5m Inlet Tube Sterile	20

EZ Flow Catheter Valve

Easy to Operate Lever Tap

Ez-Flow has a 180°, 2 stage action tap. The slightly firmer second stage reduces the risk of accidental opening on clothing or bedding.

Patient Comfort

The outlet sleeve is made of soft PVC that reduces pressure marks or discomfort for the patient.

Secure Fitting

The Ez-Flow multiple ridged connector ensures a secure fit with the catheter.

PART	DESCRIPTION	QTY
00-0060	EZ-Flow Catheter Valve	5

FlexiHang Bag Hanger

Flexible Hooks

Wide flexible hooks ensure stability whilst hooked onto the bed.

Tube Holder

Secures the outlet tube in a vertical position to ensure optimum urine flow.

Easy Clips

The two snap-fit clips shut tight to hold the urine bag firmly in place.

PART	DESCRIPTION	QTY
00-0014	FlexiHang Bag Hanger	100

Leg Bag Straps

Flexicare leg straps feature an anti-slip silicone weave which grips the leg and ensures a secure and comfortable fit.

- + Secure fastening
- + Easily adjustable

PART	DESCRIPTION	QTY
00-0032	Leg Straps Anti-Slip Lycra	100
00-0033	Leg Straps Anti-Slip Lycra(Neutral)	100

FlexiSleeve

FlexiSleeve is a knitted Lycra, latex free leg bag holder to replace leg straps.

- + Distributes weight evening
- + More comfortable for wearer

PART	DESCRIPTION	QTY
00-0035	Leg Bag Holder Small	3
00-0036	Leg Bag Holder Medium	3
00-0037	Leg Bag Holder Large	3
00-0038	Leg Bag Holder Extra Large	3

Bag Stand
